SUMMARY

Enthusiastic and ambitious Python Developer with a love for automation, full stack and the cloud. Seeking challenges with ample opportunity for learning, creativity and problem solving.

SKILLS

Technologies

- Python
- AWS
- Linux
- Git
- MySQL
- Asynchronous
- Terraform
- Bash
- Docker
- Django
- HTML
- CSS

Characteristics

- Good communication skills
- Highly organized and reliable
- Excellent problem-solving skills
- Good initiative
- Friendly and helpful attitude

EXPERIENCE

Python Developer: CiiVSOFT, April 2019 – Present

Since joining CiiVSOFT, my time has been divided between development, operations and support.

I have been actively involved in multiple Django projects, developing software to automate data ingestion from API endpoints and looking for ways to make our cloud accounts more secure, efficient and scalable.

I am experienced in front-end web development using JavaScript, HTML and CSS as well as back-end development using Celery, Redis and MySQL relational databases.

Junior Cloud Engineer: CDL, June 2018 – April 2019

During my time at CDL, my main responsibilities were to write and maintain reusable infrastructure that allowed development teams to utilize AWS resources and services across many accounts, and to operate in a support capacity.

I also took up opportunities to automate data retrieval using AWS Lambdas as well as join a large data ingestion project to provide the company with real-time monitoring of AWS infrastructure, accessible by clients and employees.

EDUCATION

BSc (Hons) Forensic Computing: University of Central Lancashire (Preston, UK), 2015 – 2018
